The Company

M.D. Micro Detectors S.p.A.

M.D. Micro Detectors certified quality system

Our products certification

M.D. Micro Detectors S.p.A.

Since 1971 **M.D. Micro Detectors S.p.A.** develops and produces a wide range of industrial sensors.

M.D. Micro Detectors S.p.A. is a company rich in terms of human, professional and material tradition and heritage, which is nowadays a worldwide synonymous of technology, quality, reliability, continuity, service and innovation.

It will be enough, just to reinforce the strong and innovative idea managing the whole Company spirit, to think that it has been the first industrial reality to produce the photoelectric sensor M18, today considered an international standard, and also one of the first companies to realize different types of area sensors

Since ever quality and reliability of the products, based also on the customer satisfaction requirements, are the main drivers of the company strategy.

The products portfolio is composed of 6 segments:

- Photoelectric Sensors
- Proximity Sensors
- Ultrasonic Sensors
- Area Sensors
- Safety Devices
- Accessories

M.D. Micro Detectors S.p.A. is able, moreover, to propose and realize versions and customizations of the products already listed in the catalogue, basing them on specific customers requirements, and it is also in measure to develop innovative solutions for industrial applications using its own technology.

The production and development processes, based on **Lean Manufacturing** principles, are subject to continuous controls and all products are always double checked.

Therefore, the extreme **M.D. Micro Detectors S.p.A.** quality has been proven by all certifications the company has got in very short time: the whole System is **ISO 9001:2008** norms complying, and a huge amount of products is **CE, ATEX, cULus, Diversey, TÜV and Ecolab certified**.

The M.D Micro Detectors Quality System

The M.D Micro Detectors Quality System complies with ISO 9001:2008 norms regarding the development, production and marketing of electronic devices for measurement, analysis and detection in both industrial and consumer applications.

Reflectors

scheme notes

- (1) Refers to individual data sheets for detailed specifications of Photoelectric Sensors
- (2) Applications in water immersion or steam are not advised
- (3) % of sensing ranges with retroreflective paper of specified size.

Measures on request.

notes

To ensure a constant detection performance, especially if used to the maximum sensing range, it is important to keep the reflector surface clean by wiping with a damp cloth

Together with reflector selection, also the working conditions are mandatory, since dust or high humidity may influence the product's performance:

RANGE

sensing distance x % reflector detection x % working conditions influence

The % working condition is an arbitrary value that can be determined only through experimentation, as typical values can be used:

clean = 100%

low levels of dust or humidity = 50%

moderate levels = 25%

high levels = 10%

The reflectors must be positioned at 90° to the optical axis with max. tolerance of $\pm 15^\circ$
